

Badania naukowe Erigo®

Obecnie dostępnych jest ponad 40 artykułów dotyczących **Erigo®** pochodzących z niezależnych grup badawczych na całym świecie. Badania te obejmują 8 randomizowanych badań kontrolowanych, 10 badań przekrojowych, badania obserwacyjne i artykuły techniczne.

„W kilku badaniach porównano bezpieczeństwo różnych metod mobilizacji dla pacjentów przebywających na OIT. Badacze porównali pionizację z Erigo® do pionizacji z typowym stołem pionizacyjnym lub mobilizacji przy asyście terapeutów i stwierdzili, że pionizacja Erigo® doprowadziła do mniejszej liczby zaburzeń ortostatycznych i znacznie mniejszej liczby przerw w treningu”.

Badania pokazują, że trening na Erigo® jest bezpieczny dla wielu grup pacjentów:
